

DX10AP featured 10inch low-frequency transducers with high-power configuration. Profit by cabinet natural extension of the transmission line design, effectively increase and improves the low-frequency response and sensitivity, without any other increase other subwoofer extra burden can be reach to 95dB, maximum 126dB. DX15AP featured CLASS-D AMP, provided small size, light weight, high efficiency, lower exothermic characteristic. Configuration work with DSW10 to extend Low-frequency.

DX10AP also featured DSP processor with processing parameters, can obtain carefully processed frequency response, corrected phase.
